

PRODUCT SPECIFICATION SHEET

Atkinson TankTop, Top Offtake Valve

Part Number: TTV-01-C

Product Description

Safely draw oil from your tank with ease with Atkinson Tanktop, Top Off Take Valve, using our innovative top outlet valve system, specifically engineered for oil-fired boilers and burner units. Featuring a unique anti-siphon valve, oil flows only when needed by the boiler, ensuring optimal usage. Should your oil supply pipe suffer damage or a leak, rest assured that our anti-siphon valve automatically shuts off, preventing any further oil loss.

Revolutionising the industry, our product is the first complete top outlet system that eliminates the need for a separate anti-siphon valve. Installation is a breeze with its compact design and 10mm push-fit connections, allowing for seamless integration directly onto standard copper oil pipes. Supported by the Environmental Agencies and OFTEC.

Features

- Floating Suction Head & Tube (1.6M)
- Anti-Siphon Valve
- Anti-Spill Valve
- Purging / Priming Button
- Non Return Valve
- Surface Gasket
- 50 Micron Filter
